Track Project

The current track is approximately (10) years old. The track has an asphalt base and a polyurethane track surface. Every March bubbles appear on the track and need to be repaired. We will replace the track with a similar track surface.

Project Scope:

- Remove existing track surface, oval, and event areas.
- Mill the top asphalt layer and repave.
- Install a new similar track system.
- Repaint all lane lines, numerals, and event markings.
- Protect the turf field, fencing, bleachers, and all adjacent features from overspray during construction.
- Clean and restore the general work area upon completion.

Glen Head Elevator Modernization

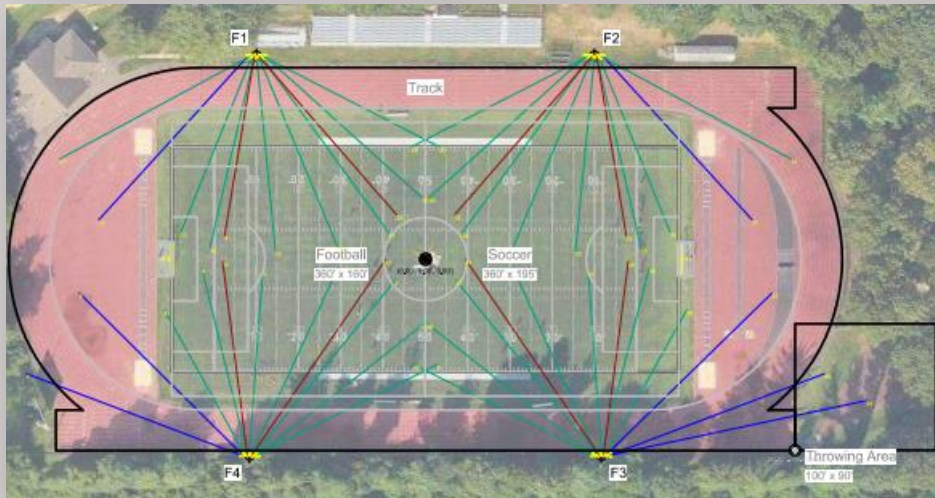

The Glen Head Elevator hasn't been updated since 1986 and has required more frequent repairs in recent years. To ensure safe and reliable service, the District is partnering with a professional elevator company on a modernization project. The existing elevator car will remain, but the internal systems that operate and protect it will be completely upgraded. Improvements include a new controller, power unit, piping, buttons, fixtures, door operator, interior door, door detection system, and other essential safety components. Once complete, the elevator will meet today's modern safety and performance standards.

Project Scope:

- Modernize the elevator's control system and core safety components.
- Install a new hydraulic power unit and updated piping/valves.
- Replace key hoistway, pit, and car equipment for improved reliability.
- Upgrade the elevator cab with new doors, fixtures, lighting, and ADA communication features.
- Replace hall stations, indicators, and fire service features.
- Complete required electrical upgrades in the pit and machine room.

High School Turf Lighting

We are partnering with a leading stadium lighting company to install four new light poles at the 20-yard lines of the football field. These downward-facing fixtures will illuminate both the field and the track, allowing the space to be used safely and effectively throughout the season.

Project Scope:

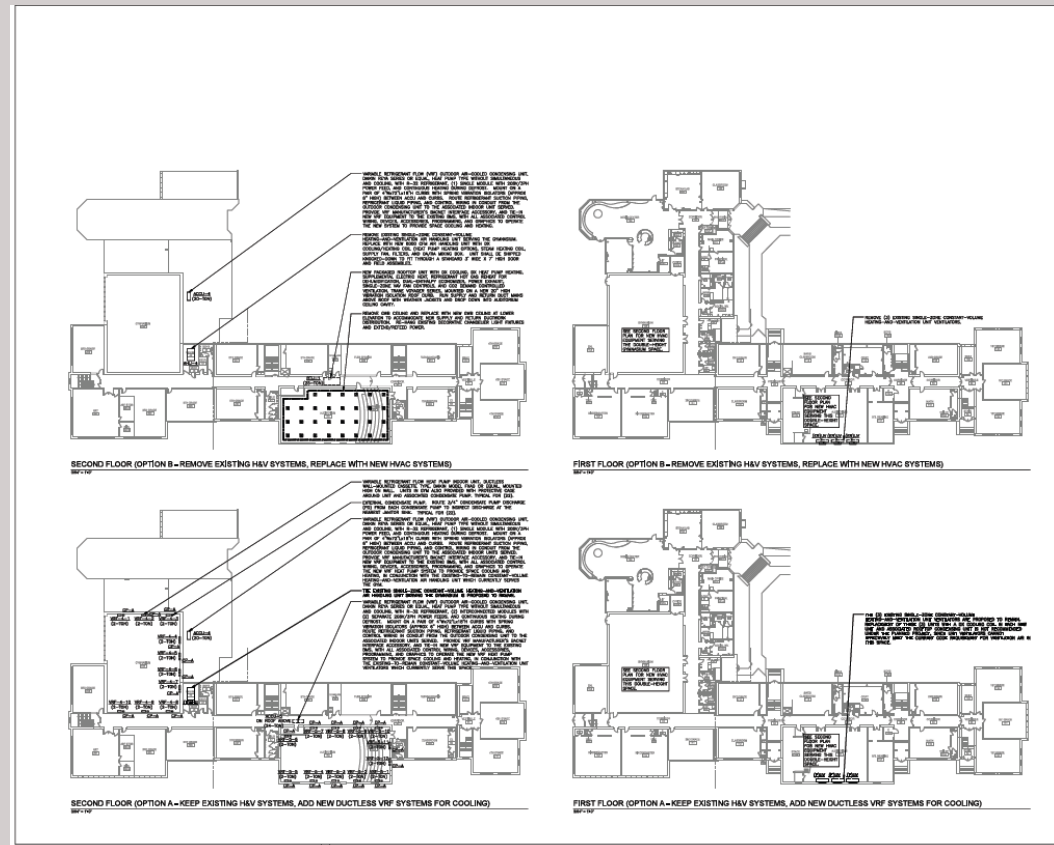

- Provide a complete, factory-built Musco light system with concrete bases, steel poles, wiring, and pre-aimed luminaires.
- Deliver guaranteed lighting levels: 50 footcandles on the field and 20 footcandles on the track.
- Include remote on/off and dimming controls with monitoring and 24/7 support.
- Supply a 25-year warranty covering all materials and onsite maintenance.

Air Conditioning at Large Gathering Spaces

Project Scope:

- Provide air conditioning to large gathering spaces at all Elementary Schools and the Middle School Gymnasium.

High School Auditorium Ceiling

We have developed a project to replace the ceiling in the auditorium. This is one of the last spaces in the High School that has an original ceiling, all other ceilings in the High School have been upgraded utilizing in-house installers, but this ceiling is too large of a project for our maintenance department.

Project Scope:

- Abatement, demolition and replacement of the existing Auditorium ceiling and lighting.
- Final design to be determined through the design process.

Middle School Sports Field Upgrades

At the Middle School we will be removing the vegetation along the golf course side of the field and replace that fence which has deteriorated and fallen down. Upgrades will be made to the existing mixed-use sports field.

High School Sports Field Upgrades

The High School Sports Field Upgrades include the installation of new turf baseball and varsity softball infields, replacement of the backstops and dugouts, building a walking path to the baseball field, and upgrades to the mixed sports field in the center of the HS field area.

Glen Head Gathering Room Upgrades

This project will include renovating the balcony area in the Glen Head Auditorium so we can fit more people for small events.

Elementary School Music Room Upgrades

Included in this project we would be removing a temporary wall in a music room which is no longer needed, replacing carpet, ceilings, and painting walls.
